

CLEANING CARDS FOR CARD READERS AND BILL VALIDATORS

Bill validators and magnetic card readers are used extensively in copy and print vending. Card reader and bill validator failures and errors are often linked to poor maintenance. After several hours of use a reader head or the validator's lenses can begin to accumulate heavy dirt caused by pollution, oxides, oil, and exposure to the elements.

What is a Cleaning Card?

Our technically advanced Jamex Cleaning Cards are specifically designed to provide preventative maintenance of any Jamex Card Reader or bill validator without dismantling the card transport or bill path. Each Jamex Cleaning Card is conveniently pre-saturated and sealed to ensure a clean card and the proper amount of solution for each use. They are constructed with a lint free, non-abrasive material on both sides allowing all the internal accepting mechanisms and components to be cleaned at the same time. Jamex Cleaning Cards will effectively remove the heavy dirt from pollution and continuous card reader or bill validator use. These Cleaning Cards are designed specifically to clean our equipment.

We recommend all devices be cleaned at least once a week. Equipment that experiences a higher volume of use should be cleaned more often. Jamex equipment is extremely reliable, especially when this simple and inexpensive preventative maintenance is performed. Our Cleaning Cards keep expensive professional visits to a minimum, and keep your equipment in good working order.

Ordering Jamex Cleaning Cards
